PORTION OF PHOTOVOLTAIC SYSTEM + STORAGE

SOLAR INVERTER

The bidirectional hybrid inverter ensures uninterrupted power and backup whenever you need it. During the day the photovoltaic system generates energy that will be destined for self-consumption, fed into the grid or used to charge the batteries. The stored energy will be released when required by the loads. In addition, with the UPS function, the battery can also be charged from the mains to provide an uninterrupted amount of energy.

Components

Wind turbine

1,5kW Horizontal wind turbine

The hybrid controller can manage the wind source in complete autonomy through the turbine production management function and its protection with dumpload resistance inside the controller. Advanced technology allows precise control over all generated values, turbine speed, output power, stored energy capacity. The product is also equipped with all short-circuit, over-current or voltage protections, which can be managed by proprietary software on a computer via RS485-USB.
