

# Integrated soldering technology for the advanced industrial assembly

For customers who want a foolproof management for the input of different soldering programs for multiple jobs or job sections on the assembly lines with high production output. Thanks to the use of a scanner and the Etneo barcode reader application, we have reached the target set for the management of several different solder profiles programs, tracing in the meantime the manufacturing.

## MINI DESKTOP SOLDERING CELL

Two-axis Solder robot with head geometry pre set for the jobs, in this case soldering of cables to faston. The operator is in charge of loading and unloading the different parts, and start the robot with the scanner that reads The matching barcode.

## SECURITY

The system is foolproof and does not require advanced skills.

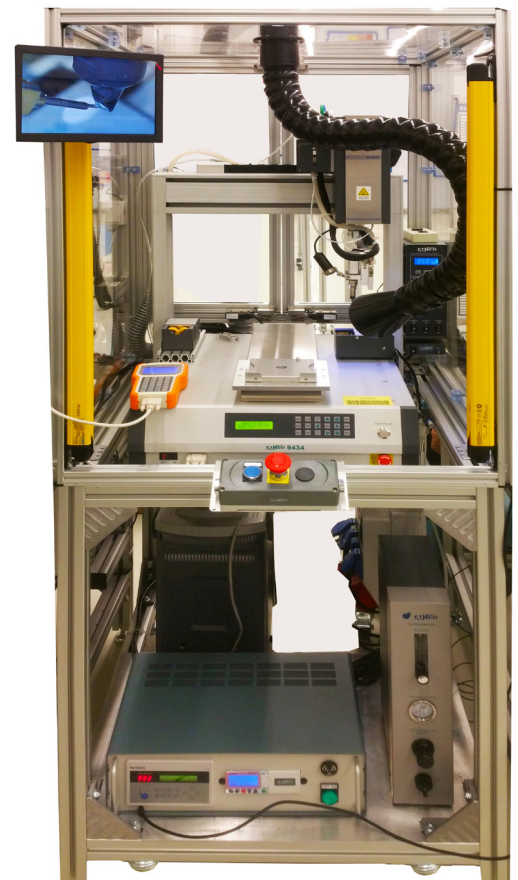

## FLEXIBLE CELL

From the desktop to the line. The configuration of the cell can 'be inserted in stand-alone environments or in lines with automatic conveyor for loading / unloading and handling the parts..

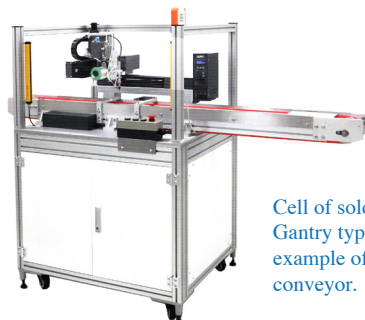

Cell soldering with Vision system, assisted by Input barcode. standalone layout insertable in line.

## CONSULTING & SERVICE

Etneo, during the working system design, indicates the best automation solution with integrated management of devices, in relation to available budget. .

Cell of soldering with Gantry type robot with example of the linear conveyor.
